

Eric Doris studied organic chemistry at the University of Strasbourg (France). He obtained his PhD degree in 1995 from the same University, under the guidance of Charles Mioskowski. In 1996 he completed his post-doctoral training with Sir Derek H. R. Barton (Nobel laureate) at Texas A&M University (USA). Since 1997, he has been working at the Alternative Energies and Atomic Energy Commission of France (CEA) where he is leading the *Nanosciences* research group. His current research interests include nanomedicine for drug delivery/imaging applications, and supramolecular assemblies on carbon

nanotubes applied to catalytic transformations.
